INTERNSHIP REPORT

Practical Experience at AFREETECH

Activities in IT Support, Document Handling, and Software Project Development

Presented by: Tuheu Tchoubi Pempeme Moussa Fahdil

Programme: Bachelor of Science in Computer Science

Level: Level 4

Institution: The ICT University, Zoatousi, Yaoundé, Cameroon

Host organization: AFREETECH

Internship period: 13 October 2026 – [END DATE TO COMPLETE]

Academic supervisor: [TO COMPLETE]

Company supervisor: [TO COMPLETE]

Academic Year 2026–2027

Certification

This is to certify that this internship report, entitled *"Practical Experience at AFREETECH"*, is submitted by Tuheu Tchoubi Pempeme Moussa Fahdil, a Level 4 Computer Science student at The ICT University, in partial fulfilment of the requirements of the programme. The report is intended to document the activities and learning experiences undertaken during the internship.

Company supervisor: _____

Signature: _____ Date: _____

Academic supervisor: _____

Signature: _____ Date: _____

Declaration

I, Tuheu Tchoubi Pempeme Moussa Fahdil, declare that this report is a record of my internship experience at AFREETECH and has been prepared for academic purposes. The descriptions of activities are based on the information and records available to me. Any external material used in the final version will be acknowledged appropriately. I understand that the report must accurately distinguish my own work from tasks performed by other staff members.

Name: Tuheu Tchoubi Pempeme Moussa Fahdil

Signature: _____ Date: _____

Dedication

I dedicate this report to my family for their encouragement and support throughout my studies. I also dedicate it to everyone who has contributed to my academic and professional development.

Acknowledgements

I would like to thank The ICT University for providing the academic foundation that prepared me for this internship. I am also grateful to AFREETECH for welcoming me into its working environment and giving me the opportunity to observe professional activities, assist with assigned tasks, and continue developing my technical skills.

I would like to acknowledge the supervisors, staff members, and colleagues who provide guidance during the internship. Their instructions and feedback help me understand workplace expectations, document-handling procedures, and the practical challenges involved in supporting technical and administrative operations.

Executive Summary

This report documents my internship experience at AFREETECH, which began on 13 October 2026. The report follows the structure of a formal academic internship report and records the activities confirmed in my internship notes. During the first days, I was introduced to the work environment, received onboarding documents, observed document-handling and printing procedures, assisted with the movement of networking components, and carried out administrative support tasks. I also continued working on my final-year software project using the company workstation.

The internship has provided an opportunity to observe how technical and administrative tasks are coordinated in a professional environment. It has also highlighted practical constraints, including the limited performance of the workstation and the need to work within the permissions available on a company computer. My final-year project, DocuMind AI, concerns intelligent document processing and the structured transfer of verified information into an enterprise resource planning system. The report will be updated as the internship progresses so that later activities, outcomes, and recommendations are based on verified experience rather than assumptions.

Chapter 1

General Introduction

1.1 Background

An internship is an opportunity to connect academic learning with professional practice. It allows students to observe workplace procedures, apply relevant knowledge, develop practical skills, and understand the responsibilities associated with working in an organization.

As a Level 4 Computer Science student at The ICT University, I am undertaking an internship at AFREETECH. The experience provides exposure to technical and administrative activities in a professional setting. In addition to assigned workplace tasks, I continue developing my final-year project, DocuMind AI, which focuses on improving the processing of scanned and digital documents.

1.2 Purpose of the Internship

The purpose of this internship is to gain practical experience, develop professional discipline, and strengthen the connection between my academic training and real workplace needs. It also gives me an opportunity to improve my communication, organization, problem-solving, and technical skills.

1.3 Objectives

The main objectives of the internship are:

- To become familiar with the host organization's working environment and procedures.
- To observe and assist with assigned administrative and technical tasks.

- To improve document organization, printing, handling, and delivery practices.
- To develop professional habits, including punctuality, communication, responsibility, and teamwork.
- To continue applying Computer Science knowledge through the development of DocuMind AI.
- To identify practical challenges and reflect on lessons learned during the placement.

1.4 Scope of the Report

This report covers the internship activities recorded from 13 October 2026 onward. The initial version focuses on the first four documented days and will be expanded as further diary entries and verified information become available. The report does not assume that the internship has ended, and it does not claim that the project has been completed.

1.5 Methodology

The report is based on personal internship notes, observation of assigned activities, and reflection on the tasks performed. The final report should also incorporate verified information about AFREETECH, the internship schedule, the supervisors, and any approved project deliverables. Confidential company information must not be included without authorization.

1.6 Organization of the Report

The report is organized into five chapters. Chapter One introduces the internship and its objectives. Chapter Two presents AFREETECH, with company-specific details to be completed using verified information. Chapter Three records activities and challenges. Chapter Four evaluates the internship environment. Chapter Five presents the conclusion and recommendations.

Chapter 2

Presentation of the Host Organization

2.1 General Presentation

AFREETECH is the organization hosting my internship. The placement provides an opportunity to observe workplace coordination and to participate in assigned technical and administrative activities.

Important: The official history, address, mission, vision, departments, and services of AFREETECH must be confirmed from company-approved sources or from the internship supervisor before this chapter is finalized.

2.2 Historical Background

[TO COMPLETE: Insert a concise, verified history of AFREETECH, including its year of establishment, founders if publicly documented, and major stages of development. Do not guess these details.]

2.3 Mission and Vision

Mission: [TO COMPLETE using the organization's official wording or an approved paraphrase.]

Vision: [TO COMPLETE using verified company information.]

2.4 Products and Services

[TO COMPLETE: Describe the services that AFREETECH actually provides. Use the company's official materials or information confirmed by a supervisor.]

2.5 Organizational Structure

[TO COMPLETE: Add a verified organizational chart or a short description of the departments and reporting structure relevant to the internship.]

2.6 Internship Placement

During the first days of the placement, I was introduced to the working environment and shown some of the activities carried out by staff. These included handling, printing, and arranging documents, as well as assisting with the movement and delivery of networking components and documents. These observations provided an initial understanding of the range of tasks that may support an organization's daily operations.

Chapter 3

Activities Carried Out During the Internship

3.1 Overview

The first documented days of the internship combined orientation, observation, administrative assistance, document handling, and continued work on my final-year project. The following entries are based on the diary information recorded at the time. Additional days should be added as the internship continues.

3.2 Day One: Tuesday, 13 October 2026

The first day began with an introduction to the organization and its working environment. I received company onboarding and policy documents to review and sign. I was also assigned a workstation using a company computer and taken on a visit around the company premises.

I observed how documents were handled, printed, and arranged. This helped me understand the importance of accuracy, order, and care when dealing with organizational records. I was also asked to carry a box containing networking components to a car. This task demonstrated that supporting technical operations may include practical logistics in addition to computer-based work.

The working day ended at approximately 6:00 p.m. Overall, the first day served as an introduction to workplace expectations, the company's environment, and the variety of tasks that may be assigned during the internship.

3.3 Day Two: Wednesday, 14 October 2026

On the second day, I continued working with the company computer. At approximately 1:00 p.m., I accompanied a supervisor to CFC, located opposite Hotel Hilton, after collecting food from a catering service. A meeting took place from approximately 2:00

p.m. to 5:00 p.m. My role during the meeting was mainly observational, which allowed me to see how staff participate in an external professional engagement.

I was also assigned a financial transaction of 140,000 FCFA. This task required attention to the amount and to the instructions provided. The day was unusually busy, and I did not take my usual break. The experience highlighted the importance of following instructions carefully and maintaining responsibility when handling tasks outside routine computer work.

3.4 Day Three: Thursday, 15 October 2026

On the third day, I continued working on my final-year project using the company computer and downloaded software and development tools needed for the work. The workstation's performance affected the pace of some tasks, so software setup required patience and careful use of the available resources.

I also went to CDEC to deliver a document to the DLC. The delivery took approximately one hour. In addition, I helped transport networking components to a car and continued with document-related work, including printing and arranging documents. I also recorded a task described in my notes as "realure"; its exact meaning needs to be clarified before it is included in the final academic version.

The day ended at approximately 6:00 p.m. The activities combined project development, document handling, and logistical support.

3.5 Day Four: Friday, 16 October 2026

On the fourth day, I completed Phase One of my project work. I also classified DAO documents before arranging them for submission. This activity required attention to document categories and order so that the materials could be organized appropriately.

I resolved the issue that had prevented Docker from running on the company computer. However, the computer's hardware remained limited, which continued to affect the overall development experience. This day demonstrated the value of troubleshooting and persistence, while also showing that successful software development depends partly on the capabilities of the available equipment.

3.6 Final-Year Project: DocuMind AI

3.6.1 Project Overview

DocuMind AI is my final-year project concept, focused on Intelligent Document Processing (IDP) and automated ingestion of verified document data into an enterprise resource planning (ERP) system. The project addresses a common digital-workflow challenge: information contained in scanned or digital documents may need to be entered manually into business systems.

The intended system will allow users to upload multi-page PDF documents, extract relevant information using optical character recognition (OCR) and text-processing techniques, review uncertain results, and prepare verified structured data for transfer through an API to an ERP platform such as Odoo. The initial target languages are French and English.

3.6.2 Intended Objectives

The intended objectives of DocuMind AI are:

- To accept scanned or digital PDF documents through a web interface.
- To extract text and selected fields such as dates, references, vendors, and amounts.
- To identify uncertain extraction results for human review instead of silently accepting them.
- To store validated information in a structured format.
- To provide a backend API that can support integration with an ERP platform.

3.6.3 Planned Technical Direction

The current technical direction includes a Python backend using FastAPI, a MySQL database, and a React web frontend. The OCR approach is planned as a hybrid solution combining custom processing logic with a trained recognition model. Containerization and service-based deployment are longer-term architectural goals. These choices describe the project's intended direction and should be updated if the implementation changes.

3.6.4 Progress and Constraints

During the first days of the internship, I continued project work on the company workstation and downloaded required development tools. The computer was slow, and some software installation tasks were affected by limited administrator privileges. Docker initially presented a setup problem, which I later resolved on 16 October 2026. The machine's hardware limitations remained a constraint.

The project is still in development. Any claims about accuracy, performance, successful ERP integration, or production deployment should be included only after they have been tested and documented.

3.7 Skills and Knowledge Developed

Based on the activities recorded so far, the internship has provided opportunities to develop or practise:

- **Document organization:** printing, arranging, classifying, and preparing documents for submission.
- **Professional responsibility:** following instructions and handling assigned tasks with care.
- **Observation and communication:** observing a professional meeting and learning from staff activities.
- **Technical troubleshooting:** investigating and resolving a Docker setup problem.
- **Adaptability:** continuing development work despite limited workstation performance and permissions.

These are early observations and should be expanded with examples from the remainder of the internship.

3.8 Difficulties Encountered

3.8.1 Limited Workstation Performance

The company computer was slow, which reduced the speed of software setup and development tasks. Working within the available resources required patience and priori-

tization.

Response: I continued tasks where possible, downloaded required tools, and addressed setup issues step by step. Further recommendations may include reviewing the workstation's specifications and prioritizing essential tools, subject to company policy.

3.8.2 Restricted Installation Permissions

Some installation and configuration tasks were limited by the permissions available on the company computer.

Response: Software installation and system-level changes should be coordinated with the authorized administrator. This approach respects company security policies while allowing development work to continue using approved tools.

3.8.3 Technical Setup of Docker

Docker did not initially run as expected on the workstation.

Response: I investigated the setup issue and recorded that it was resolved on 16 October 2026. The exact technical cause and the steps used to resolve it can be added once confirmed.

3.8.4 Clarification of Diary Entries

One activity in the original diary was recorded as "realure". Its intended meaning is not yet clear.

Response: This item should be clarified before the final report is submitted, rather than replaced with an assumed task.

Chapter 4

Evaluation of the Internship Organization

4.1 Introduction

An evaluation of the internship environment helps identify factors that support learning and areas that could be improved. Because the internship is ongoing and only the first four days are documented in the current draft, the observations below are preliminary. A balanced evaluation should be revised after more experience has been recorded and, where appropriate, discussed with a supervisor.

4.2 Preliminary Strengths

The first days provided exposure to both computer-based work and practical administrative tasks. The opportunity to use a company workstation supported continued project development. Observing a professional meeting and assisting with document and equipment handling also offered insight into work beyond software development.

4.3 Preliminary Areas for Improvement

The workstation's limited performance affected the pace of development activities. In addition, restricted installation privileges meant that some setup tasks depended on the permissions available on the machine. These observations concern the specific working conditions experienced during the first days and should not be treated as a complete assessment of the organization.

4.4 Opportunities

The combination of document workflows and software development provides an opportunity to reflect on how digital tools may improve document organization and data entry. DocuMind AI explores one possible technical response to document-processing challenges. Any future use by the host organization would require requirements validation, security review, and approval from relevant stakeholders.

4.5 Risks and Constraints

Potential constraints observed so far include limited computing resources and software installation restrictions. Other organizational risks should be discussed only when supported by further observation or verified information.

4.6 Preliminary SWOT Summary

Table 4.1: Preliminary SWOT observations based on the first four documented days

Category	**Observation**
Strengths	Exposure to varied activities; access to a company workstation; opportunity to observe staff and professional workflows.
Weaknesses	The workstation was slow, and some tasks were constrained by available installation permissions.
Opportunities	Apply Computer Science knowledge to practical workflows and continue developing the DocuMind AI project.
Threats / Constraints	Hardware limitations and restricted permissions may delay some development activities. Other risks require further evidence.

Chapter 5

Conclusion and Recommendations

5.1 Conclusion

The first documented days of my internship at AFREETECH have introduced me to a professional working environment involving document handling, printing, administrative support, logistics, observation of a meeting, and software development. These activities have shown that workplace contribution involves not only technical knowledge but also attention to detail, reliability, adaptability, and respect for organizational procedures.

I have continued working on DocuMind AI while using the available company workstation. The experience has exposed practical development constraints, including limited computer performance and restricted installation permissions. Resolving the Docker setup issue was a useful technical milestone, although the project's broader implementation and evaluation remain ongoing.

This report is an interim draft based on the diary information currently available. The final conclusion must be updated at the end of the internship to reflect the full duration, additional tasks, verified outcomes, and overall learning experience.

5.2 Recommendations

Based on the first four documented days, the following preliminary recommendations are proposed:

1. **Review development workstation requirements.** Where feasible, ensure that the assigned computer can run the software required for approved development tasks.

2. **Establish an approved software-installation process.** Interns should know whom to contact when administrative permissions are required.

3. **Maintain a daily activity log.** Recording tasks, dates, outcomes, difficulties, and lessons learned will improve the accuracy of the final report.

4. **Clarify document-handling procedures.** Clear instructions on classification, printing, delivery, and submission can help reduce errors.

5. **Validate project requirements before deployment.** DocuMind AI should be evaluated with representative documents and human verification, with data protection and company authorization considered before any integration.

6. **Update the report throughout the internship.** The company profile, organizational evaluation, activities, and recommendations should be completed using verified information.

Appendix A

Internship Diary Summary

Table A.1: Summary of the first four documented internship days

Date	**Recorded activities**
13 October 2026	Orientation; received onboarding and policy documents; company tour; observed document handling, printing, and arranging; carried a box of networking components to a car.
14 October 2026	Worked on the company computer; accompanied a supervisor to CFC opposite Hotel Hilton; observed a meeting; carried out a financial transaction of 140,000 FCFA as assigned.
15 October 2026	Continued final-year project work and software downloads; delivered a document to the DLC at CDEC; assisted with networking-component logistics; printed and handled documents; one diary term needs clarification.
16 October 2026	Completed Phase One of project work; classified DAO documents; resolved the Docker setup problem; workstation performance remained limited.

Appendix B

Information to Complete Before Final Submission

Use this checklist to prepare the final report:

- ☐ Confirm the internship end date and exact duration.
- ☐ Add the official AFREETECH address, history, mission, vision, and services.
- ☐ Confirm the names and titles of the company and academic supervisors.
- ☐ Clarify the diary term “realure”.
- ☐ Add further daily or weekly activities as the internship continues.
- ☐ Add approved photographs, screenshots, diagrams, or other evidence where appropriate.
- ☐ Verify all project outcomes and avoid reporting planned features as completed features.
- ☐ Review confidentiality requirements before including company documents or client information.
- ☐ Update the table of contents and lists of figures and tables after compiling.

INTERNSHIP REPORT — UPDATE

Practical Experience at AFREETECH

Presented by: Tuheu Tchoubi Pempeme Moussa Fahdil

Programme: Bachelor of Science in Computer Science — Level 4

Institution: The ICT University, Zoatousi, Yaoundé, Cameroon

Host organization: AFREETECH

Purpose of this update

This addendum updates the internship record with the activities reported for Saturday, 17 October 2026 (Day Five) and Monday, 19 October 2026 (Day Six). It should be read together with the original report. The internship is ongoing, so the end date, supervisor details, and company profile remain to be confirmed.

3.6 Day Five: Saturday, 17 October 2026

I arrived at approximately 7:36 a.m., before the other staff members. I waited for someone to arrive and open the door. During the day, I started and completed Phase Two of my DocuMind AI project work and began designing the database schema. I also used Swagger to explore and test the API.

In addition to project work, I carried papers and documents out of the company and helped clean the workplace after ink powder had spilled. I also developed further ideas for the project. These activities combined software development with practical workplace support.

3.7 Day Six: Monday, 19 October 2026

When I arrived, a meeting was taking place in the refectory, where I was expected to work. I waited until the meeting ended before starting. I then worked on Phase Three of DocuMind AI, which focused on the frontend, and reported completing that phase during the day. I was also sent to buy food for one person at the DAF and continued working on the project afterward.

I was asked to back up a database on a Virtual Private Server (VPS); the available notes do not confirm whether the backup was completed. At the end of the day, I gave a presentation that did not go well. I was then instructed to stay home for two days and return on Thursday, 22 October 2026.

Project progress note

The recorded completion of Phases One, Two, and Three refers to the project phases as described in the internship notes. The current project has a React frontend dashboard, a FastAPI backend, and a MySQL connectivity check. Document upload, OCR extraction, human review, and ERP integration should not be described as completed unless they are implemented and tested.

Appendix A — Updated Internship Diary Summary

Date	Recorded activities
13 Oct 2026 (Day 1)	Orientation; received onboarding and policy documents; company tour; observed document handling, printing, and arranging; carried a box of networking components to a car.
14 Oct 2026 (Day 2)	Worked on company computer; accompanied a supervisor to CFC opposite Hotel Hilton; observed a meeting; carried out an assigned financial transaction of 140,000 FCFA; no usual break taken.
15 Oct 2026 (Day 3)	Continued project work and software downloads; delivered a document to the DLC at CDEC; assisted with networking-component logistics; printed and handled documents; diary term “realure” still needs clarification.
16 Oct 2026 (Day 4)	Completed Phase One; classified DAO documents; resolved Docker setup problem; workstation remained underpowered.
17 Oct 2026 (Day 5)	Arrived at 7:36 a.m.; completed Phase Two; began database schema design; used Swagger to explore/test API; carried papers/documents out; cleaned spilled ink powder; developed project ideas.
19 Oct 2026 (Day 6)	Waited for a meeting to finish before starting work; completed Phase Three focused on frontend; bought food for one person at the DAF; continued project work; was asked to back up a database on a VPS (completion unconfirmed); end-of-day presentation did not go well; instructed to stay home for two days and return 22 October.

Items still to confirm before final submission

- Internship end date and total duration.
- Names and titles of academic and company supervisors.
- Official AFREETECH history, mission, vision, address, services, and organizational structure.
- Meaning of the diary term “realure”.
- Whether the VPS database backup was completed.
- Any additional activities after 19 October 2026.
